\*p < .1; \*\*p < .05; \*\*\*p < .01

Note. Models 1–4 are weighted least squares at the county level, with within-county sample sizes, adjusted by sampling weights, as weights. Model 5 is weighted least squares at the individual level with state-year fixed effects. Standard errors, in parentheses, are clustered at the county level in model 5. There are 50 counties in model 5.

**Table 2**

The data contain missing values. CEM will match on them; see the manual for other options.

Note. Model 1 is the first-stage relationship. Models 2–5 are weighted two-stage least-squares models, with weights as given in table 1. Standard errors are in parentheses.

Note. Columns 1, 3, and 5 simply include proportion black in the year 2000 as an additional control to the baseline specification from table 1. Columns 2, 4, and 6 use sequential g-estimation (Seq, g-est) of Vansteelandt (2009). WLS p weighted least squares. Standard errors are in parentheses.
